teachIT – Research Led Teaching

has successfully completed the 2 hour workshop

The workshop consisted of the following discussions:

- Meanings of "research led teaching". We will ask what the idea means both for teachers and for students, and how it is different from 'research led learning'. Is there a dichotomy between teaching and research, and if so, what might constitute a meaningful relationship between them? In addition, we will ask:

- What are the skills desired and cultivated through research led teaching and learning?

- How can we at ITU best develop a research culture of learning and teaching that is appropriately supportive and resourced?

- What kinds of differences arise between different disciplines and how do we support the kinds of learning and teaching methods that are most appropriate in interdisciplinary programs?
